

Student: Ayesha Khan

4.

Water is used as a raw material in photosynthesis, providing hydrogen ions for the light reactions.

1.

H₂O

Transpiration is the process by which plants lose water vapour through stomata in their leaves.

3.

100 degrees Celsius

7.

The water cycle involves evaporation, condensation, and precipitation, continuously moving water between the atmosphere, land, and oceans.

9.

The chemical symbol for oxygen is O₂, a diatomic molecule essential for respiration.
