

Answers :

- 1) ~~Nucleus~~ Mitochondria
- 2) (B) Carbon Dioxide
- 3) Photosynthesis is the process by which green plants make their own food using sunlight, water & carbon-dioxide, releasing oxygen as by-product.
- 4) Plants absorb carbon dioxide through their leaves and water through their roots. Using sunlight captured by chlorophyll, these are converted into glucose and oxygen.
Reactants : carbon dioxide + water.
Products : glucose + oxygen.
- 5) (a) chlorophyll absorbs sunlight, mainly in the red and blue regions, and provides the energy needed to drive photosynthesis.

5) (b) Sunlight intensity.

b) ~~Water cycle~~ is a cycle of ~~water~~
~~that aims~~
